

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

five such birds, two from Massachusetts (♀, Brookline, April 26, 1895, wing 2.88; ♀, April 28, 1894, wing 2.90), evidently late northern migrants; two from Rhode Island, wintering birds (♂, Middletown, Dec. 22, 1900, wing 2.89, ♂, wing 2.86), and one from Florida (♂, Kissimmee, Dec. 5, 1892, wing 2.88).

In the collections there will probably be found many specimens referable to this race, which, though I am adverse to naming slight natural and to be expected differences, are widely different enough to deserve a name, *if* the present accepted races of *sandwichensis* are to be recognized.—REGINALD HEBER HOWE, JR., *Longwood, Mass.*

**The Cardinal in Cambridge, Mass.**—On Wednesday, November 27, 1901, I saw and identified a male Cardinal (*Cardinalis cardinalis*) near my house in Cambridge. It had already been seen on the 19th of the month about a quarter of a mile away, and it seems probable that it will winter about Cambridge. It does not seem likely that it is an escaped cage-bird, because males of many species of birds are known to often wander north after the breeding season; also because it very rarely occurs that cage-birds escape or are released, and such infrequent occurrences certainly cannot account for the dozen or more records of the Cardinal in Massachusetts. The fact that most of these records are of males seems to be explained by the tendency of male birds to go north after breeding, and also by their brilliant plumage causing them to be more often noticed than the olive-gray female.

In this connection I should also like to make a correction in my record of the Hooded Warbler (*Wilsonia mitrata*), which appeared in the October number of 'The Auk' (XVIII, p. 397), in which I stated that I knew of no other record of this bird for Massachusetts. On investigating the matter, however, I find that there are four previous records. Therefore the present status of this bird in Massachusetts is as follows: (1) Brookline, one taken June 25, 1879; (2) Taunton, two birds noted May 8, 1888; (3) Provincetown, a male taken June 25, 1888; (4) Framingham, a male taken October 15, 1893; (5) Cambridge, a male noted September 5, 1901. It is also said to have formerly bred about Pittsfield in the western part of the State.—ARTHUR C. COMEY, *Cambridge, Mass.*

**The Cardinal Breeding at Sioux City, Iowa.**—On October 2, 1901, I wrote to Mr. R. Ridgway, Washington, D. C., as follows: "In this connection permit me to report that three weeks ago last Sunday, I saw an adult male *C. virginianus* [= *Cardinalis cardinalis*] at Riverside, a park where the timber and underbrush is almost in its original state, five miles from this [Sioux] city along the Sioux River. I learned from the superintendent of the park that he had seen within the past two years something like a dozen of these birds, old and young. I have frequently made visits to these almost primitive woods for many years, about thirty, and never before saw anything of them. Last Sunday, however, I observed a 'young-
